AutoCAD History While software development has a history that goes back centuries, some of the most important milestones in the history of AutoCAD and its predecessors can be traced back to the 1970s. Before AutoCAD was introduced, the U.S. military was the first organization to adopt a CAD application for design and drafting, acquiring the first in-house CAD software, Computer-Aided Design and Drafting (CAD/D). The application was based on specialized technology that allowed it to rapidly draw and create detailed, precise drawings of models of aircraft at a fraction of the cost of drawing the same models by hand. The application came to the attention of the AutoDesk company when it made a presentation to the U.S. Army Research Institute. After demonstrating its capabilities, the company was granted an exclusive license to develop CAD/D for the U.S. military. (AutoDesk later sold the U.S. military CAD/D to Dassault Systemes in 1986.) The technology used by CAD/D is known as the raster imaging model (RIM). It was one of the most powerful computer graphics technologies of the time and, when combined with a raster display, produced stunning images with an appearance similar to that of hand-drawn diagrams. In the late 1970s, Autodesk released its first CAD product, ArchiCAD, in a dual floppy disk and hard-drive form. ArchiCAD combined an architectural visualization software package with a RIM-based design system. The application displayed models as vector graphic diagrams. When ArchiCAD was introduced, the raster display was at the center of technology. In the CAD world, raster displays were huge (up to 70 inches by 38 inches) with extremely low resolution (one square inch is displayed on a 70-inch screen). In addition, hard drives were becoming cheaper and
