31aa4d5b50Synthesis and Antitumor Activity of Novel
3-Aryl-5-nitro(5H)-1,2,4-oxadiazoles.

Aryl-5-nitro(5H)-1,2,4-oxadiazoles were synthesized in the order of aryl > or = R = OEt --> NO₂ --> H or the corresponding acid and acylation, followed by deprotection of the resulting acid chloride and coupling with trimethylacetyl chloride, lead tetraacetate, and appropriate aromatic amines. In vitro antitumor activity of the new compounds was evaluated by means of their ability to inhibit the methylation of 3H-thymidine and 3H-uridine in V79 Chinese hamster lung cells. The order of potency was well correlated with the lipophilicity of the tested compounds.

Rural Leadership Program The RWG5 program has an opening for a 10 week fellowship in rural leadership. As someone who wants to better himself and the world, an opportunity to attend an intensive rural leadership program would be a great choice for you. The program runs each summer in Ontario and is led by Ohio State University and the

Centre for Rural Policy and Development (CRPD), a policy think tank that focuses on the needs of rural citizens and organizations. The fellowship in rural leadership is 10 weeks long with two full days in each week of the program, allowing time to explore this rich and complex community and to spend considerable time with participants' home community. The 2017 application deadline is 5 pm on March 15, 2017. You must be an English or French language graduate.

Applicants must also have at least three years' community and/or leadership experience. To learn more about the program, click on the application link below: Drug abusers in an intravenous therapy programme. Most of the adults attending a methadone programme started by our unit had themselves been referred in response to a 'drug problem', but many came in through other routes. Of the patients entering an assisted withdrawal programme in the first four months of 1982, only 9% had had previous drug treatment; most had received secondary care for their problem. In most cases, clients had been in contact with either a general practitioner or a specialist team, but about 75% did not have a blood-borne virus test. The mean intake dose of methadone was 104 mg/day;
