The present study was designed to examine the association between dietary beta-carotene and lung cancer incidence in a cohort of Chinese women. In this cohort study, 18,931 women aged 35 to 70 years were recruited in 1993 from Shanghai, China. Dietary beta-carotene intake was assessed by a food frequency questionnaire and the data were collected at baseline and at a follow-up 4 years later. The participants were followed-up for an average of 7.4 years. Cox's regression models were used to estimate multivariate relative risks (RRs) of lung cancer. Compared with women in the highest quintile of dietary beta-carotene intake (152.1 to 676.8 mg), those in the lowest quintile had a nonsignificantly increased risk of lung cancer [RR = 1.28, 95% confidence interval (CI) = 0.95-1.72]. When the analyses were limited to those who had never smoked, the RR for those in the lowest quintile of beta-carotene intake was 1.43 (95% CI = 1.05-1.93). The results were consistent when analyses were stratified by sex, daily beta-carotene intake, smoking status and pack-years of smoking. In conclusion, our data suggest that higher dietary beta-carotene intake is associated with a slightly increased risk of lung cancer in Chinese women who had never smoked.Ubuntu 9.10 Developer Summit The Ubuntu Developer Summit is coming on October 6-9 in California, where the Ubuntu team from Canonical will meet and discuss the results of the past 6 months in Ubuntu development, and where their plans for the future will be set. Readying for Actions

Characters become stronger and stronger according to your actions.

Start with a "stock" equipment and increase your levels with luck.

Then use the skills you earned to level up, examine new disciplines, and become the strongest in the Lands Between.

If you align your action with the blue line, you're guaranteed to raise the level of strength and attributes and improve your skills and equipment. When your status matches that of the blue line, aim for EXPLOSION.

The blue line changes with every attack, and you can passively and dynamically access it during battle by pressing the blue button. The blue line impacts your combo count and EXP gain.

When you advance along the blue line, you learn new techniques and can even learn exotic arts from lethal elementalists, arms craft experts, and demon slayers. It's the key to achieving victory in battles.
