

EDIT: I also don't need to load the spreadsheet file into Google Sheets. It just needs to be visible on the web. A: The problem with your current code is that it's going in all directions, and the start and end of the macro call do not match. Try something like this: Option Explicit Sub ReportHtml() Application.ScreenUpdating = False Dim s As String s = "" s = s & "Student Questionnaire - Week 4 " s = s & "Please provide your answers to the following set of questions" s = s & "" Application.ScreenUpdating = True With Sheet1.QueryTables.Add(Connection:="URL;C:\Users\212932\Desktop\afc5.csv", Destination:=Sheet1.Range("\$A\$1")) .WebSelectionType = xlSpecifiedTables .WebFormatting = xlWebFormattingNone .WebPreFormattedTextToColumns = True .WebConsecutiveDelimiter = True .WebSingleBlockTextImport = False .RefreshOnFileOpen = True .RefreshStyle = xlImportRange .SaveData = True .RefreshPeriod = 0 .TextFilePromptOnRefresh = False .TextFilePlatform = 1033 .TextFileStartRow = 1 .TextFileParseType = xlPartial .TextFileTextQualifier = xlTextQualifierDoubleQuote .TextFileConsecutiveDelimiter = False .TextFileTabDelimiter =
