Windows . Windows . It is known to employ film canisters in machine tools, in particular for the purpose of transporting the tools of a machining unit. It is furthermore known to employ a film canister on whose basis an entire machining unit can be disassembled, in order to permit rapid and easy change of the tools in question. The film canister is mounted in the machining unit so that it can be moved between the workpiece and the work position of the machine tool, and can also be rotated around an axis extending transversely to the work position. This facilitates rapid replacement of the tools while the actual work is proceeding. In order to disassemble the entire machining unit, the film canister may be removed from the tool holder and mounted above the work position, at which the tools are to be changed. It is furthermore known that film canisters can be connected with the tools, or that they can be introduced into the respective tool holder. The tool holder is connected by screwing with a thread on
