The Pension Systems Regulatory Authority (PSRA), a UK regulator, has announced a proposal to change the rules for the pension industry, and one of the key changes under discussion is the definition of a corporate pension plan. "At present, the definition of a pension plan in the UK is clear, but is rather restrictive. It typically applies to a group of individuals who are employed in a company and are deemed to be paying into a pension scheme," said Simon Howard-Smith, head of equities and investment services, at Hargreaves Lansdown. "Under the PSRA proposal, it is proposed to broaden the existing definition to cover someone who is either part of a plan run by a company or working in a company whose pension provision is being run by an entity who is considered to be a pension provider," he told Financial Advisor. "The PSRA's proposals would mean that pension schemes run by a UK company would be subject to the same pension regulation regime as schemes run by private pension providers," he added. More On This... The regulator is also looking to change its rules regarding unfunded defined benefit (UDF) schemes, and Howard-Smith said there was talk of completely withdrawing from this type of scheme. "One of the key proposals from the PSRA is the elimination of UDF schemes, as investors typically do not take much risk with them. They are seen as a soft target, because of their lack of access to borrowing and financial markets. The PSRA is seeking to change its rules on UDFs, and is proposing a complete withdrawal from the market, which would require new legislation to be passed," he said. He added that one of the key challenges in any attempts to change the rules of the pension industry is identifying those who own and control the company and to whom the end of their employment may impact the pension scheme they have subscribed to. "The regulation of pension funds by the regulator is driven by the goal of improving the integrity of the market. This is especially important for small pension funds that operate in the 'grey' market, as the regulator has a duty to ensure the integrity of the pension market. Therefore

Review: 'End of Faith: Religion, Democracy and the Meaning of Life' by Sam Harris Almost every political argument in American politics has become an intellectual argument in recent years. That is, politics generally has become a matter of competing theories of how to live and how to act. Sam Harris' End of Faith: Religion, Terror, and the Future of Reason doesn't just address these debates about how we should live but rather how we should think, a topic that has been looming in the background throughout American political thought. Where Do We Stand? Harris points out that there are only two types of political theory in the West: the pluralist view and the theocratic view. He notes that both have common intellectual sources: Immanuel Kant (1724-1804) and Thomas Aquinas (1225-74). Both of these men took it for granted that the world was both the product of and simultaneously under the authority of God. However, for Kant, God was a freely acting Being with his own purposes and plans, and for Aquinas, God created a world that was good and just and lay in the hands of humans to bring about. For Aquinas, the economy, the order of things, is the summum bonum. Humans — who by nature are equal in stature — are here to serve God's interests. According to Harris, many intellectuals — who are not believers — give some sort of philosophical rational justification for this belief. They take their basic insight from John Locke, who thought that human beings are born into a world that already exists, a world in which individuals come into existence through pure and random chance. This assertion clashes with Harris' own moral and intellectual beliefs. He has long thought that the products of the work of God are extraordinarily important and all humans should be treated with tremendous respect. If the products of the work of God are important, then society should be organized on the basis of them. Rational Principles For Harris, humanity should not be organized around our limits but rather around our highest potential. This is the message of a number of philosophers in the 20th century, including Gustav Bergmann (1925-90) and Anthony Flew (1923-92). But for Harris, this requires that we first understand what it means to be rational and to understand human nature. In order to be rational, we are free and sovereign creatures. When Thomas Hobbes (1588-16
